

# Three Body Problem

## Skeel & Skriver in collaboration with Clive Ellegaard

**Opening: Friday 30.11. 2018 5-7pm**

Duration: 30.11. – 21.12. 2018

The artist duo Skeel & Skriver has for more than three decades worked with art installations in the border area between arts and science. Their works are represented at Esbjerg Art Museum and at Kiasma in Helsinki. Since 2010 their light installation *Colliderscope* has covered the façade of the Niels Bohr Institute at Blegdamsvej in Copenhagen. The installation, which intuitively translates experimental data from the LHC particle accelerator in CERN into light traces, has been created in collaboration with the physicists Clive Ellegaard, Troels Petersen and Anders Holm.

From November 30<sup>th</sup> 2018 Skeel & Skriver show an installation in three parts at Galleri Tom Christoffersen created in close collaboration with Clive Ellegaard. The exhibited works all take their starting point in and investigate different types of chaos phenomenon occurred by light, movement and magnetism.
